

END TO END DATA PROTECTION

“EasiShare-GigaCentral integration offers a more comprehensive data protection solution.

The combined solution provides seamless backup from endpoints to DR sites to protect organisation's data with a peace of mind.”

GigaCentral is a multi-cloud file management platform which provides a simple, flexible and reliable backup & recovery solution. It supports organisations’ data protection strategies by ensuring data availability in the event of site failures or ransomware attacks.

Designed with a storage agnostic approach, GigaCentral allows organisations to connect with a diverse range of legacy and modern storage technologies. It becomes a single platform to unify data silos and facilitates speedy recovery of data.

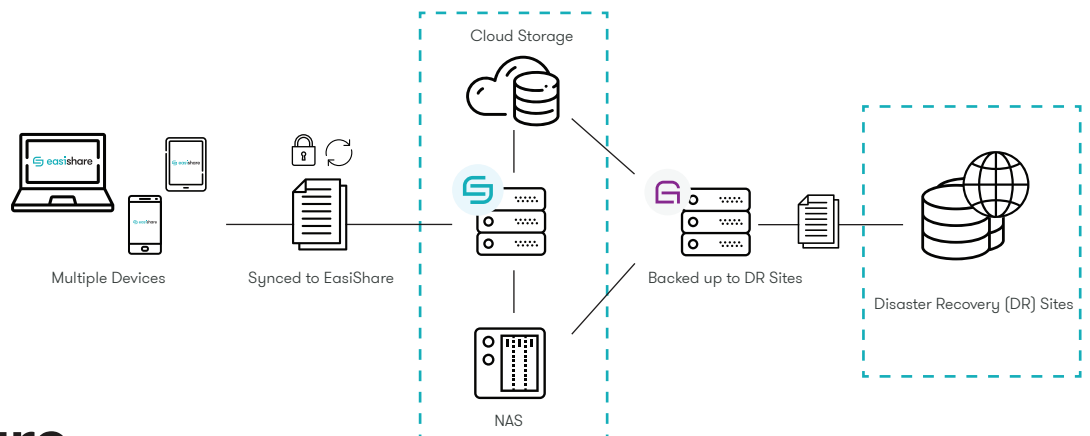

GigaCentral’s interface eases stressful disaster recoveries through its intuitive dashboards and controls. It simplifies the steps needed to execute a recovery and restores critical files for a quick resumption of business operations.

CHALLENGES

Today, ransomware remains a critical threat towards data protection of critical systems and files. Government agencies and organisations have been implementing data protection policies. However, this is done with varying extents of maturity. IT departments often face resistance towards the adoption of data recovery solutions due to financial constraints.

Data recovery solutions have long been viewed as an unnecessary expenditure. Its value and significance are validated only in the event of a crisis. In contrast, preventive measures such as network segmentation or the banning of USBs, have been deemed more important in deterring cyber threats. Despite that, ransomware attacks are still on the rise and preventive measures alone do not ensure our files are always protected.

HOW IT WORKS

During an Attack

- (1) Storage systems are crippled and files are encrypted by ransomware attacks
- (2) Files are unable to be accessed by users within the organisation
- (3) Business operations are ceased temporarily

After an Attack

- (4) Immutable copies are recovered from DR sites via GigaCentral
- (5) Affected systems and files are recovered back to its original state
- (6) Business operations are back to the norm

KEY BENEFITS

Seamless Backup

With GigaCentral's replication and immutable snapshots, files in EasiShare are automatically backed up to DR sites. Organisations enjoy a peace of mind knowing their files are protected from issues such as site failures or ransomware.

Stress-Free Recovery

During disasters, affected files can be easily restored in GigaCentral. This eases the stress faced by IT admins amidst the crisis, enabling them to focus on other recovery procedures in their business continuity plan.

Future-Proof Data Protection

The amalgamation of EasiShare and GigaCentral provides a single interface that enables seamless integration of new systems. This is achieved without the need for tedious processes of data migration, thereby saving implementation cost and time.
