

PROTECTING YOUR CRITICAL DIGITAL ASSETS

The only trusted platform to govern your file exchanges, ensuring valuable data are delivered in a secured manner.

SECURE FILE TRANSFER/REQUEST

In today's digitised workplace, an innocent act of sharing files can cause major damages to organisations. As a knee-jerk reaction, IT departments had superficially implemented the ban on removable media and vulnerable corporate tools without giving users a viable solution.

Such friction forces users to **find workarounds for bypassing controls** and **use public consumer tools to share sensitive corporate files**. This unfortunately expands digital attack surfaces and brings even greater risks of data leakages.

EasiShare offers a simple file sharing solution for users to meet the organisation's security requirements with modern data loss preventive mechanisms.

FEATURES

Restrict the Downloading of Files and its Contents

Set the shared file to "View Only" and automatically watermarked it with company logos/recipient's email address.

Prevent Unauthorised Users to Access/ Upload Files

Users are required to authenticate their identity first, using OTP, before further actions can be taken.

Limit Lifespan of "Shared Link" Exposures

Set an expiration date for the external file sharing link and track file activities.

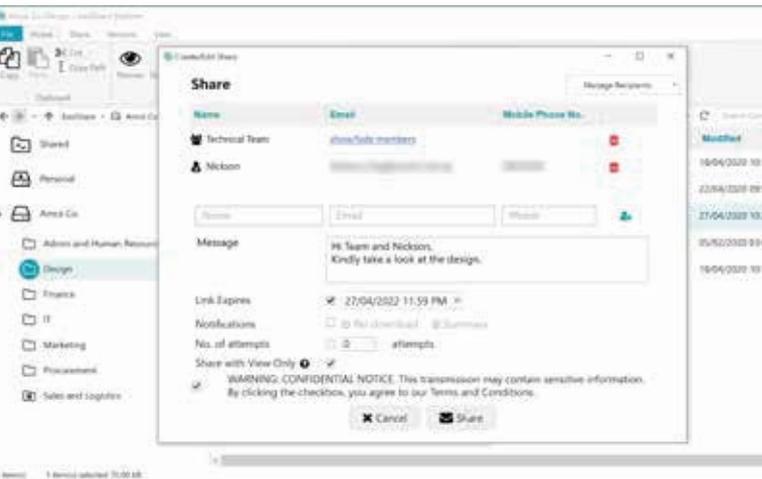

Replace Email Attachments Using a Secured Shared Link

Share files in Outlook through a secured link by integrating with EasiShare Outlook Add-In.

Stop Malicious Files from Jeopardising Your Digital Workplace

Integrate EasiShare with scan engines to prevent, detect and remove malware/viruses.

Avoid Accidental Sharing of Sensitive Files

Data owner(s) can predefine that a specific file/folder requires workflow approval before the user shares it.

TEAM COLLABORATION

The world of work is more interconnected and interdependent than ever before. Hence, users are required to collaborate more with both internal colleagues and external parties.

The **increase in exchanges** also **exposes organisations to file security risks**. Collaboration tools are now attractive targets for threat actors to compromise and use during cyber attacks, making useful productivity tools the very enablers of major data breaches.

EasiShare provides a data safe haven to manage and govern daily file collaborations through granular controls and comprehensive audit logs.

FEATURES

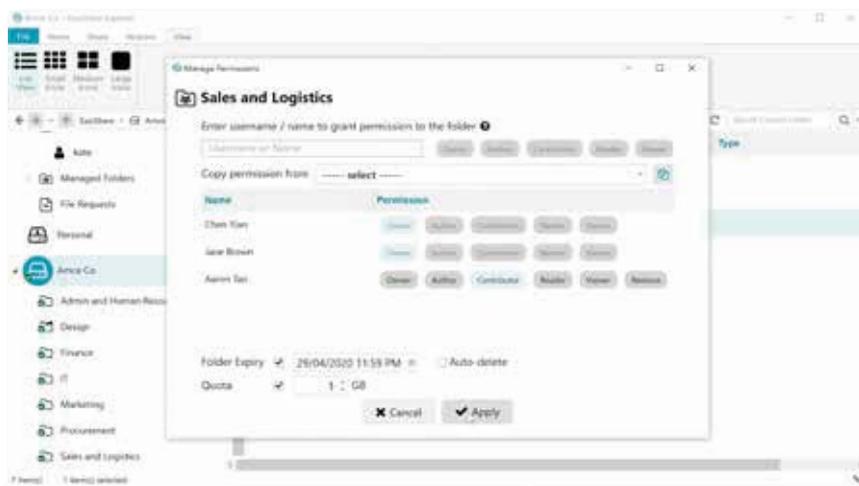

Unified File Access through a Single Interface

Organise and manage files centrally, regardless if it is on-premise or in the cloud.

Manage Team Member's Roles and File Permissions

Ability to define every user's role in the folder depending on their job functions.

Collaborate Anywhere and Anytime

Work on files together with your team using desktop, mobile, or tablet

Recover Overwritten Files

Easily access and retrieve your previous version of files.

Prevent File Editing Interruptions

Use "Check-In"/"Check-Out" to manage work-in-progress files, allowing only one user to edit files at a time.

Stay in Compliance

EasiShare leverages industry-standard protocols to ensure the security of all file transfers and meet regulatory standards.

Data Loss Prevention

Remotely "remove" data of lost/stolen devices so that the data would not be compromised if it falls into the wrong hands.

Ring-Fence Folder Access

Limit sensitive files within folders to be accessed by a specific user group, location(s) or device(s).

FEATURES

Get Notified When a File/Folder Changes

Monitor changes to the files/folders when collaborating with others.

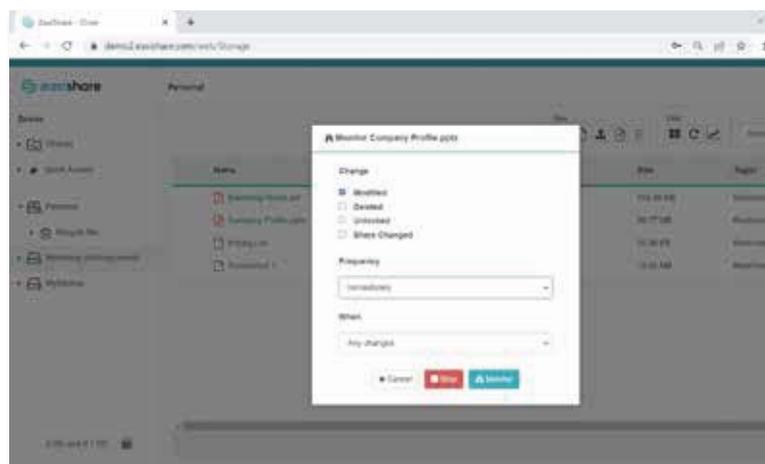

Classify All Your Files

Allow users to select and tag files to apply security policy enforced by the IT administrator.

Edit Files on the Web

Easily edit files using an online editor without downloading them.

ENDPOINT SYNC & BACKUP

Critical files capture all the essences of our work and that is why they are called "digital assets". Data loss due to incidents such as **hardware failure would be disastrous**, in today's data driven world.

At the same time, users want to be efficient too! Cumbersome manual "copy & paste" methods are no longer acceptable and organisations need better endpoint file backup & recovery solutions.

EasiShare helps sync and back up files to resilient repositories. Together with the ability to recover swiftly, organisations can quickly bounce back from disasters to deliver business results consistently.

FEATURES

Ensure Your Files are Always Available

Backup files from your devices to organisation's central file repository and recover your files, in the event of crisis.

Reduce Time Required to Sync Files

Delta sync compares the new file version with the previous one, transferring only the changes instead of the entire file.

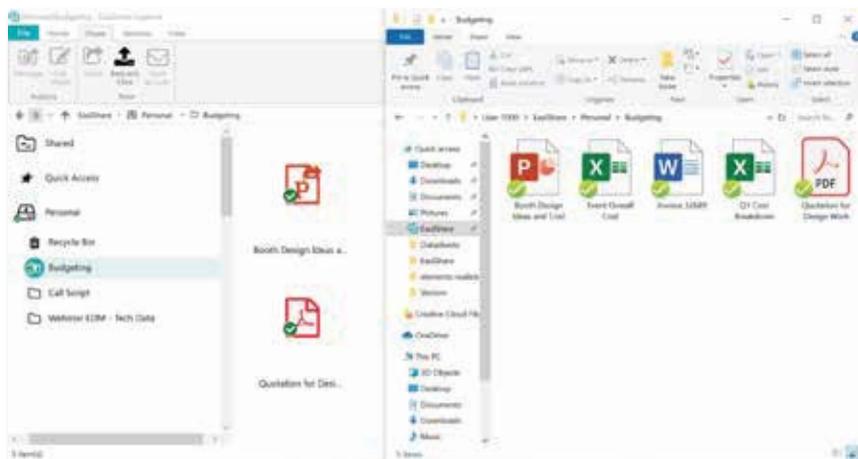

Fuss-Free Backup

Files are automatically backed up as IT administrator can define the backup folders for you.

Maintain the Latest Updates of Files

Continuously sync files in real-time when you enter organisation's network.
