

SECURE FILE MANAGEMENT WITH MEANINGFUL AND BETTER INSIGHTS

“With the improvements in machine learning and performance capabilities in Splunk Enterprise, EasiShare can deliver even better experience to its users and visualise the patterns and trends easily.

Being able to utilise the data that has been collected in EasiShare Admin Portal helps companies to spot insider threats and detect anomalies earlier.”

Splunk Enterprise collects data from any source, including metrics, logs, clickstreams, sensors, stream network traffic, web servers, custom applications, hypervisors, containers, social media and cloud services.

It enables you to search, monitor and analyze that data to discover powerful insights across multiple use cases like security, IT operations, application delivery, industrial data and IoT. Additionally, with the power of machine learning baked in, you can make faster, more informed decisions across the organization.

CHALLENGES

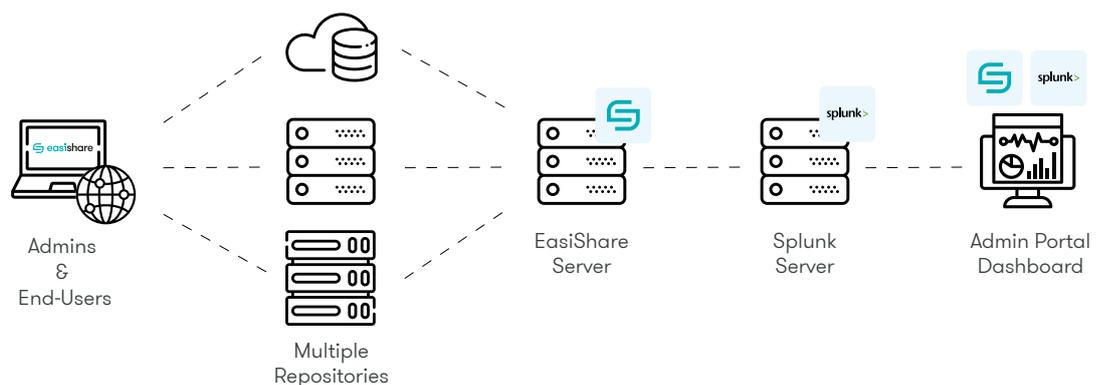

Today, digital transformation efforts are necessary to spur businesses to new frontiers, accelerating time to market, adapting rapid changing marketing conditions, improving customer experiences and creating new sources of competitive advantage.

Data is at the center of these business transformations. Organisations are leveraging on data to make informed and calculated decisions to optimise profits and reduce potential market risk. This emerging trend of a data driven culture has also stressed the importance of safeguarding these data from threat actors.

With an ever-changing threat landscape, companies are constantly vulnerable to potential data breaches. Despite putting in place preventive measures and analysing tons of data from audit logs, IT leaders might still be unable to uncover all the potential security gaps faced in their organisations.

SOLUTION ARCHITECTURE

Splunk and EasiShare provide a comprehensive admin portal with visualisation and enable organisations to get meaningful insights from both user and admin audit logs.

HOW IT WORKS

Both user and admin audit logs in EasiShare are essential for organisations to provide proof of compliance and operational integrity. The data from the audit logs get processed by Splunk Enterprise and the results are shown on the visually appealing dashboards instead of hundreds or thousands of rows of data that's been exported from the audit logs.

Being able to utilise the data that has been collected in EasiShare Admin Portal helps companies to spot insider threats and detect anomalies earlier. Integration of EasiShare and Splunk empowers organisations with better and visual insights on the file transaction traffic, user activities and storage utilisation.

KEY BENEFITS

EasiShare, together with Splunk Enterprise, brings actionable intelligence to IT leaders to address potential security gaps found in the exchange of unstructured data or privileged users' activities.

Early Breach Detection

With EasiShare and Splunk partnership, IT leaders don't have to sift through tons of data to identify and contain the potential cyber security issues created by the use of third party collaboration tools, malicious insider threats and privileged user abuses.

Comprehensive Visualisation

Organisations can now provide its IT teams rich visual dashboards to help them to get actionable insights from their audit logs much easier. The dashboards will also provide business users to make better and informed decisions from business analytics to security.

www.inspire-tech.com

Established in 2000 in Singapore, Inspire-Tech has grown from a humble start-up into a future-driven and internationally expanding organisation which provides easy-to-use and secure software products and services.

Since its establishment, Inspire-Tech has helped more than 500 organisations to boost their workforce efficiency and productivity, and empower their employees to do more, sustainably.

www.splunk.com

Splunk is the world's first Data-to-Everything Platform designed to remove the barriers between data and action, so that everyone thrives in the Data Age while empowering IT, DevOps and security teams to transform their organizations with data from any source and on any timescale.

With Splunk, data provides clarity, elevates discussion and accelerates progress for innovators in IT, security, DevOps and more.
